Employee Engagement Survey

March 2017 Results Report

Arlington Independent School District

Summary of Results for Scaled Survey Data

The Arlington Independent School District is committed to creating a great place to learn, work, and achieve. To build on this commitment the leadership of the school district gathers and analyzes data on essential goals and measures - staff engagement, parent satisfaction, quality of service from district departments, and student achievement. This journey of excellence based on measurable goals began in 2013 and focuses on the use of data to identify gaps, take action, and follow through to ensure continuous improvement in performance in the Arlington Independent School District.

The Employee Engagement Survey was administered to all school district employees **to assess their level of satisfaction with the work environment of the school or department where they work. Employees completed the survey about the school or department identified as the place where their supervisors work**. The initial baseline survey was administered in March 2013.

This report provides an overview of the findings for the March 2017 administration of the Employee Engagement Survey for the Arlington Independent School District.

District Summary Results

The district's overall mean is **3.79**, using a scale of 1 to 5, with five being the highest. A total of 5,509 employees responded to the survey, and the number of employee responses per item (n) ranged from 5,408 to 5,500. Table 1 displays the overall mean and item means by survey administration.

Benchmark Percentile Rankings

Percentile ranks were developed to provide a *normed* comparison for the district's item means and its overall mean. Table 5 on page 6 displays the percentile ranks for each of the district's item means and its overall mean. Two benefits of using percentile ranks include:

(a) a standardized frame of reference for item mean / overall mean interpretation, and
(b) showing where a score, in this case the district's item means and overall mean, fits within a larger distribution of scores.

The "larger distribution of scores" in this report includes responses from all Studer Education partners across all survey administrations through Spring 2016 (which represents approximately 110,000 individual responses or the equivalent of 124 districts in a Monte Carlo study). Using Monte Carlo simulation, the survey administration data are used to generate a dataset with 100,000 districts. The simulated dataset is based on the mean and standard deviation of the actual dataset, but has enough cases to smooth out the curve. The simulated dataset is used to calculate the percentile ranks.

Percentile rank tables are provided for each school level, and for district departments (in aggregate), specifically:

- Early Childhood, Primary and Elementary Schools

- Intermediate, Middle Schools

- High School, Technical Schools

- District Departments

These are provided in Appendix 2 with an example in the first table for how to compare school / department results with the percentile table.

School and Department Results

Tables 6 and 7 (pages 7-16) present the number of respondents (Table 6) and the overall mean (Table 7) for each school and department on the employee engagement survey. Means are provided for schools or departments with more than five (5) respondents for the survey.
